Bell Work   4/24/2015

Find the roots of the following quadratic

$$12x^2 + 5x - 2$$

$(3x+2)(4x-1)$

	$4x$	-1
$3x$	$12x^2$	$-3x$
2	$8x$	-2

$3x + 2 = 0$
$\quad -2 \quad -2$

$\dfrac{3x}{3} = \dfrac{-2}{3}$

$\boxed{x = -2/3}$

$x = -\dfrac{2}{3}$

$4x - 1 = 0$
$\quad +1 \quad +1$

$\dfrac{4x}{4} = \dfrac{1}{4}$

$x = \dfrac{1}{4}$

$x = \dfrac{1}{4}$
