

State whether the relations below represent functions. Explain your reasoning.

a.

x	y
-2	-8
0	4
2	-8
4	-14

Function: Yes      No  
 Explanation:

b.

Function: Yes      No  
 Explanation:

c.  $\{(1,2), (3,6), (5,4), (5,8), (7,10)\}$

Function: Yes      No  
 Explanation:

Evaluated  $f(x) = x^2 - 6x + 13$  for  $f(-4)$ .

What is the value of  $a$ ?

$$2(a + 4) = -a - 14 + 3a$$

Find  $f(4)$ , when  $f(x) = 19x - 4$

Solve for  $x$ .

$$-7 - (-2x) = 3 + 2x - 10$$

Solve  $PV = NRT$  for  $R$ .

Solve for  $c$  and justify your steps:

$$82x + 5 = 80x - 7$$

Translate and solve the following:

A fourth of a number less than eleven is equal to the number doubled

Choose ALL correct answers.

The ordered pair  $(-3, 4)$  is a solution to a system of equations. One of the lines in the system is  $-2x + y = 10$ . Which of the following could be the other line? (LT 8)

- a.  $-4x - 5y = -8$
- b.  $3y - x = 9$
- c.  $y - 3x = 13$
- d.  $2x + 6y = -18$

Write the equation for a line that passes through the points  $(-2, 8)$  and  $(4, 2)$ .

Graph the following function on the graph at the right:  $y = 4x - 3$ .

Graph the following function on the graph at the right:  $3x - 9y = 18$ .
